## The sum and the average of a random sample

Let  $X_1, X_2, \dots, X_n \stackrel{i.i.d}{\sim} \mathbb{P}$  be a random sample with  $EX_i = \mu$  and  $VarX_i = \sigma^2$  for  $i = 1, \dots, n$  and let's define

$$Y = \sum_{i=1}^n X_i$$

as the sum of the random sample and

$$\bar{X}_n = \sum_{i=1}^n \frac{X_i}{n} = \frac{1}{n} \sum_{i=1}^n X_i$$

as the *sample mean* or the average of the random sample.

## Expected value and variance of $Y$ and $\bar{X}_n$

Let's use the properties of the expected value and variance to obtain:

►  $EY =$

►  $VarY =$

►  $E\bar{X}_n =$

►  $Var\bar{X}_n =$

## Simulations in R part 1

Let's work with simulations in R to show, approximately, that the expected value and variance of  $Y$  and  $\bar{X}_n$  are the ones shown above.

## The Weak Law of Large Numbers (WLLN)

Let  $X_1, X_2, \dots, X_n \stackrel{i.i.d}{\sim} \mathbb{P}$  with  $EX_i = \mu$  and  $VarX_i = \sigma^2$  for  $i = 1, \dots, n$  and

$$\bar{X}_n = \frac{1}{n} \sum_{i=1}^n X_i$$

It can be shown that  $\bar{X}_n$  converges in probability to  $\mu$ , or in math notation:

$$\bar{X}_n \xrightarrow{P} \mu$$

as  $n \rightarrow \infty$ .

# The Central Limit Theorem (CLT)

Let  $X_1, X_2, \dots, X_n \stackrel{i.i.d}{\sim} \mathbb{P}$  with  $EX_i = \mu$  and  $VarX_i = \sigma^2$  for  $i = 1, \dots, n$ ,

$$\bar{X}_n = \frac{1}{n} \sum_{i=1}^n X_i \quad Z_n = \frac{\bar{X}_n - \mu}{\sigma/\sqrt{n}} \quad \text{and} \quad Z \sim \text{Normal}(0, 1)$$

and we define  $F_n$  as the CDF of  $Z_n$  and  $\Phi$  as the CDF of  $Z$ . The CLT states that, for any real number  $z$ ,

$$F_n(z) \rightarrow \Phi(z)$$

as  $n \rightarrow \infty$ .

## Practical use of the CLT

- ▶ The previous result tells us that when  $n \rightarrow \infty$  the distribution of  $\bar{X}_n$  is normal.
- ▶ However, for fairly small values of  $n$ ,  $\bar{X}_n$  is already approximately normally distributed
  - ▶ The rule of thumb commonly used is  $n \geq 30$

## Simulations in R part 2

Let's work with simulations in R that show that the WLLN and the CLT hold, approximately.
